**Stalker Call Of Pripyat Console Commands Moneyl ((TOP))**

---

Stalker C.O.P. is a common abbreviation used for the game's command console. In-game abbreviations are used in the game's user interface. All console commands are named after section names in the computer architecture book *Your CPU* by Richard Gray et al. (version 3.0, second edition, 1995) It will save your game state - as the default savegame filename `saved.pak` in default savegame folder `savedgame` on your hard drive. The complete list of Saved Game Location values in the `User.Itx` or the console command itself will be mentioned in the console commands descriptions in the next page. The EM2 Rifle (**Gauss Rifle** in *S.T.A.L.K.E.R.: Shadow of Chernobyl* and *S.T.A.L.K.E.R. Call of Prip'yat*) is the main weapon of the EM2 Weapons team. The EM2 Rifle is featured in *S.T.A.L.K.E.R.: Clear Sky* . It is very similar to the standard EM2 Rifle, except with dual iron sights and a much stronger bipod as a default (but it can be disassembled quickly to use with the standard EM2 Rifle). It features a modified trigger as well. The EM2 Shotgun (**Gauss Shotgun** in

[i]S.T.A.L.K.E.R.: Shadow of Chernobyl[/i] and [i]S.T.A.L.K.E.R. Call of Pripjat[/i]), is a variant of the EM2 Shotgun. It is featured in the "Worst missions" section of both S.T.A.L.K.E.R. Shadow of Chernobyl and S.T.A.L.K.E.R. Call of Pripjat. It has a slightly longer barrel and a weaker bipod as default, but the bipod can be disassembled quickly to use with the standard EM2 Shotgun. It is a rare variant that is only available to a certain character called "Equalizer." The Equalizer variant has a different ammunition clip and a different reload animation. It is the most powerful variant of the EM2 shotgun to date.

This is the page where all commands are organized by category. Select the one you want from the list by clicking it. Stalkers - Common. Players will respawn in the environment that they are in when they start a game. They can travel freely, use any items, and create more stalkers. They can use non-stalker weapons, use vehicles, and use the

Walk-Speed command. Normally, when a player dies in the single player game, they respawn at the last known location they were in. The reason behind this behavior is that it provides an easier and more "natural" experience for the players. In the multiplayer game, there's no mechanism to simulate a similar behavior; you will respawn in the last player's location. So, if a player spawns, by default, in a snowy wilderness, their stalkers spawn in the same area. If they were creating a zone and they die, their stalkers will spawn inside their own zone. This behavior can be changed in the spawn menu, as seen on the following screenshot. Also be wary of not activating the command WalkSpeed in the single player game. The player will jump a lot on steep slope and they will also not find the way to move in the single player game. Treats enemys and stalkerz as players. When it's active, you'll become invincible to the player. However, the weapon will behave like it was fired upon you. (that's the case for the Big Ben when fired from behind). Even without the 'invisibility' setting, you will be able to fire on

a player without getting shot. So if you need to kill a player, place your weapon towards the ground, fire, and then, quickly change your weapon to the first weapon. After you dealt your first shot, you'll notice that the player didn't move, so switch to your first weapon. It's more efficient and it's also the right thing to do. Using the invisibility during the Single Player missions might take some of your time, but you will be able to catch up with the rest of the players very soon. Stalker Call Of Pripyat Console Commands Money! You can use the Page Up and Page Down keys to scroll through text in the console. Detailed descriptions for most of the useful console commands are already provided on the previous page, as the User.Itx settings and the console commands of the same name operate exactly the same way. Changing a variable in the console can become permanent since it is written to your User.Itx file. Make sure to set a variable back to its default or desired setting, or restore your backed up User.Itx file afterwards if you just want to experiment and not keep your changes. Several commands
